

Setting up for success:
Everything you need to know when planning an
RNA-seq experiment

Harvard Chan Bioinformatics Core
Harvard T.H. Chan School of Public Health
Boston, MA

Shannan Ho Sui

John Hutchinson

Brad Chapman

Rory Kirchner

Meeta Mistry

Radhika Khetani

Mary Piper

Lorena Pantano

Michael Steinbaugh

Victor Barrera

Kayleigh Rutherford

Peter Kraft

Consulting

- RNA-seq, small RNA-seq and ChIP-seq analysis
- Genome-wide methylation
- WGS, resequencing, exome-seq and CNV studies
- Quality assurance and analysis of gene expression arrays
- Functional enrichment analysis
- Grant support

<http://bioinformatics.sph.harvard.edu/>

Training

<https://hbctraining.github.io/main/>

- Short workshops on introductory, intermediate and advanced topics related to NGS data analysis
- Monthly, 2-3 hour, hands-on and free workshops on “Current Topics in Bioinformatics”
- In-depth courses (8- or 12-day formats)

Tell us about yourself...

- Are you doing an RNA-seq experiment right now?
- If so, what stage of the experiment are you at?
- What is your current position, e.g. PI, postdoc, staff?

<https://pollev.com/hbctraining945>

Workshop scope

Learning Objectives

- ✓ Describe the resources needed to perform an experiment to **identify differentially expressed genes using RNA sequencing**, including in the laboratory and computationally.
- ✓ Describe key experimental design considerations.
- ✓ Explain the analysis workflow (including QC) starting with raw data and finishing with a list of differentially expressed genes.
- ✓ List tools and computational skills necessary to implement the various steps in the above-mentioned workflow.

Base components

✓ Unix/Linux shell

- Dealing with large data files (e.g. FASTQ, BAM)
- Using bioinformatics tools (e.g. STAR, Trinity)
- Accessing and using high-performance compute clusters

✓ R

- Parsing and working with smaller results files
- Statistical analysis, e.g. differential expression analysis (DESeq2)
- Generating publication-quality figures from complex data (ggplot2)
