

Introduction to R and Differential Expression Analysis

Harvard Chan Bioinformatics Core

https://hbctraining.github.io/Intro-to-R-with-DGE/

Shannan Ho Sui

John Hutchinson

Brad Chapman

Rory Kirchner

Meeta Mistry

Radhika Khetani

Mary Piper

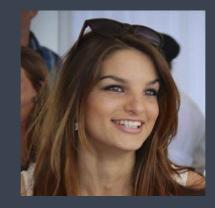

Lorena Pantano

Michael Steinbaugh

Victor Barrera

Kayleigh Rutherford

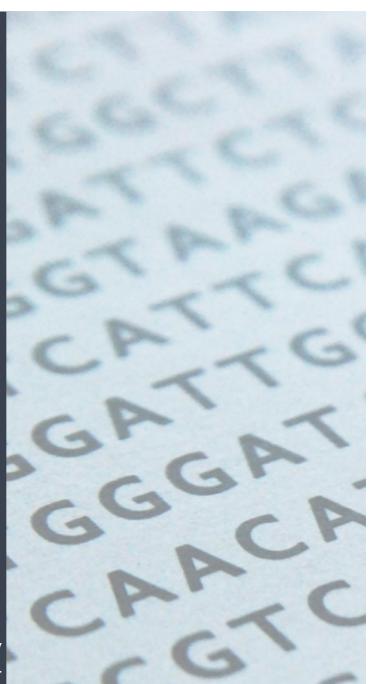

Peter Kraft

Harvard Chan Bioinformatics Core

Consulting

- RNA-seq, small RNA-seq and ChIP-seq analysis
- Genome-wide methylation
- WGS, resequencing, exome-seq and CNV studies
- Quality assurance and analysis of gene expression arrays
- Functional enrichment analysis
- Grant support

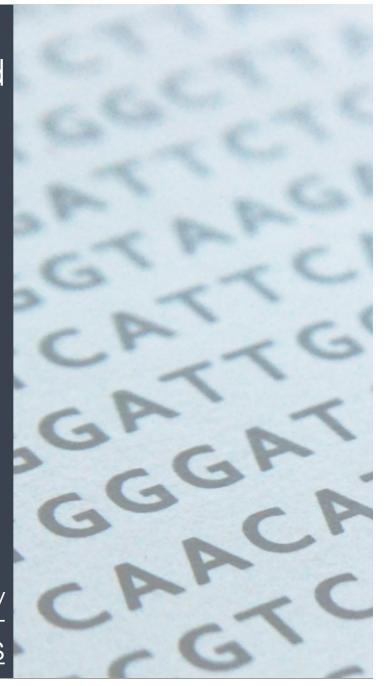

http://bioinformatics.sph.harvard.edu/

Training

- Short workshops on introductory, intermediate and advanced topics related to NGS data analysis
- In-depth course September 5th -October 11th http://tinyurl.com/ngs-course-info-2018
- Monthly, 2-3 hour, hands-on and free workshops on "Current Topics in Bioinformatics"

Class Introductions!

Workshop Scope...

Learning R

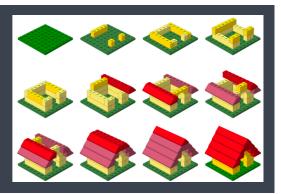

Workshop Scope (1/2)

R basics

- Become comfortable with RStudio (a graphical interface for R)
- Fluently interact with R using RStudio
- ✓ Become familiar with R syntax
- Understand data structures in R
- ✓ Inspect and manipulate data structures
- ✓ Install packages and use functions in R
- Visualize data using simple and complex plotting methods

Workshop Scope (2/2)

Differential Gene Expression analysis

- Understand the considerations for performing statistical analysis on RNAseq data
- Start with gene counts (after alignment and counting)
- Perform QC on count data
- Use DESeq2 to perform differential expression analysis on the count data and obtain a list of significantly different genes
- Visualization of differentially expressed genes
