

Introduction to RNA-seq using High-Performance Computing (HPC)

Harvard Chan Bioinformatics Core

in collaboration with

HMS Research Computing

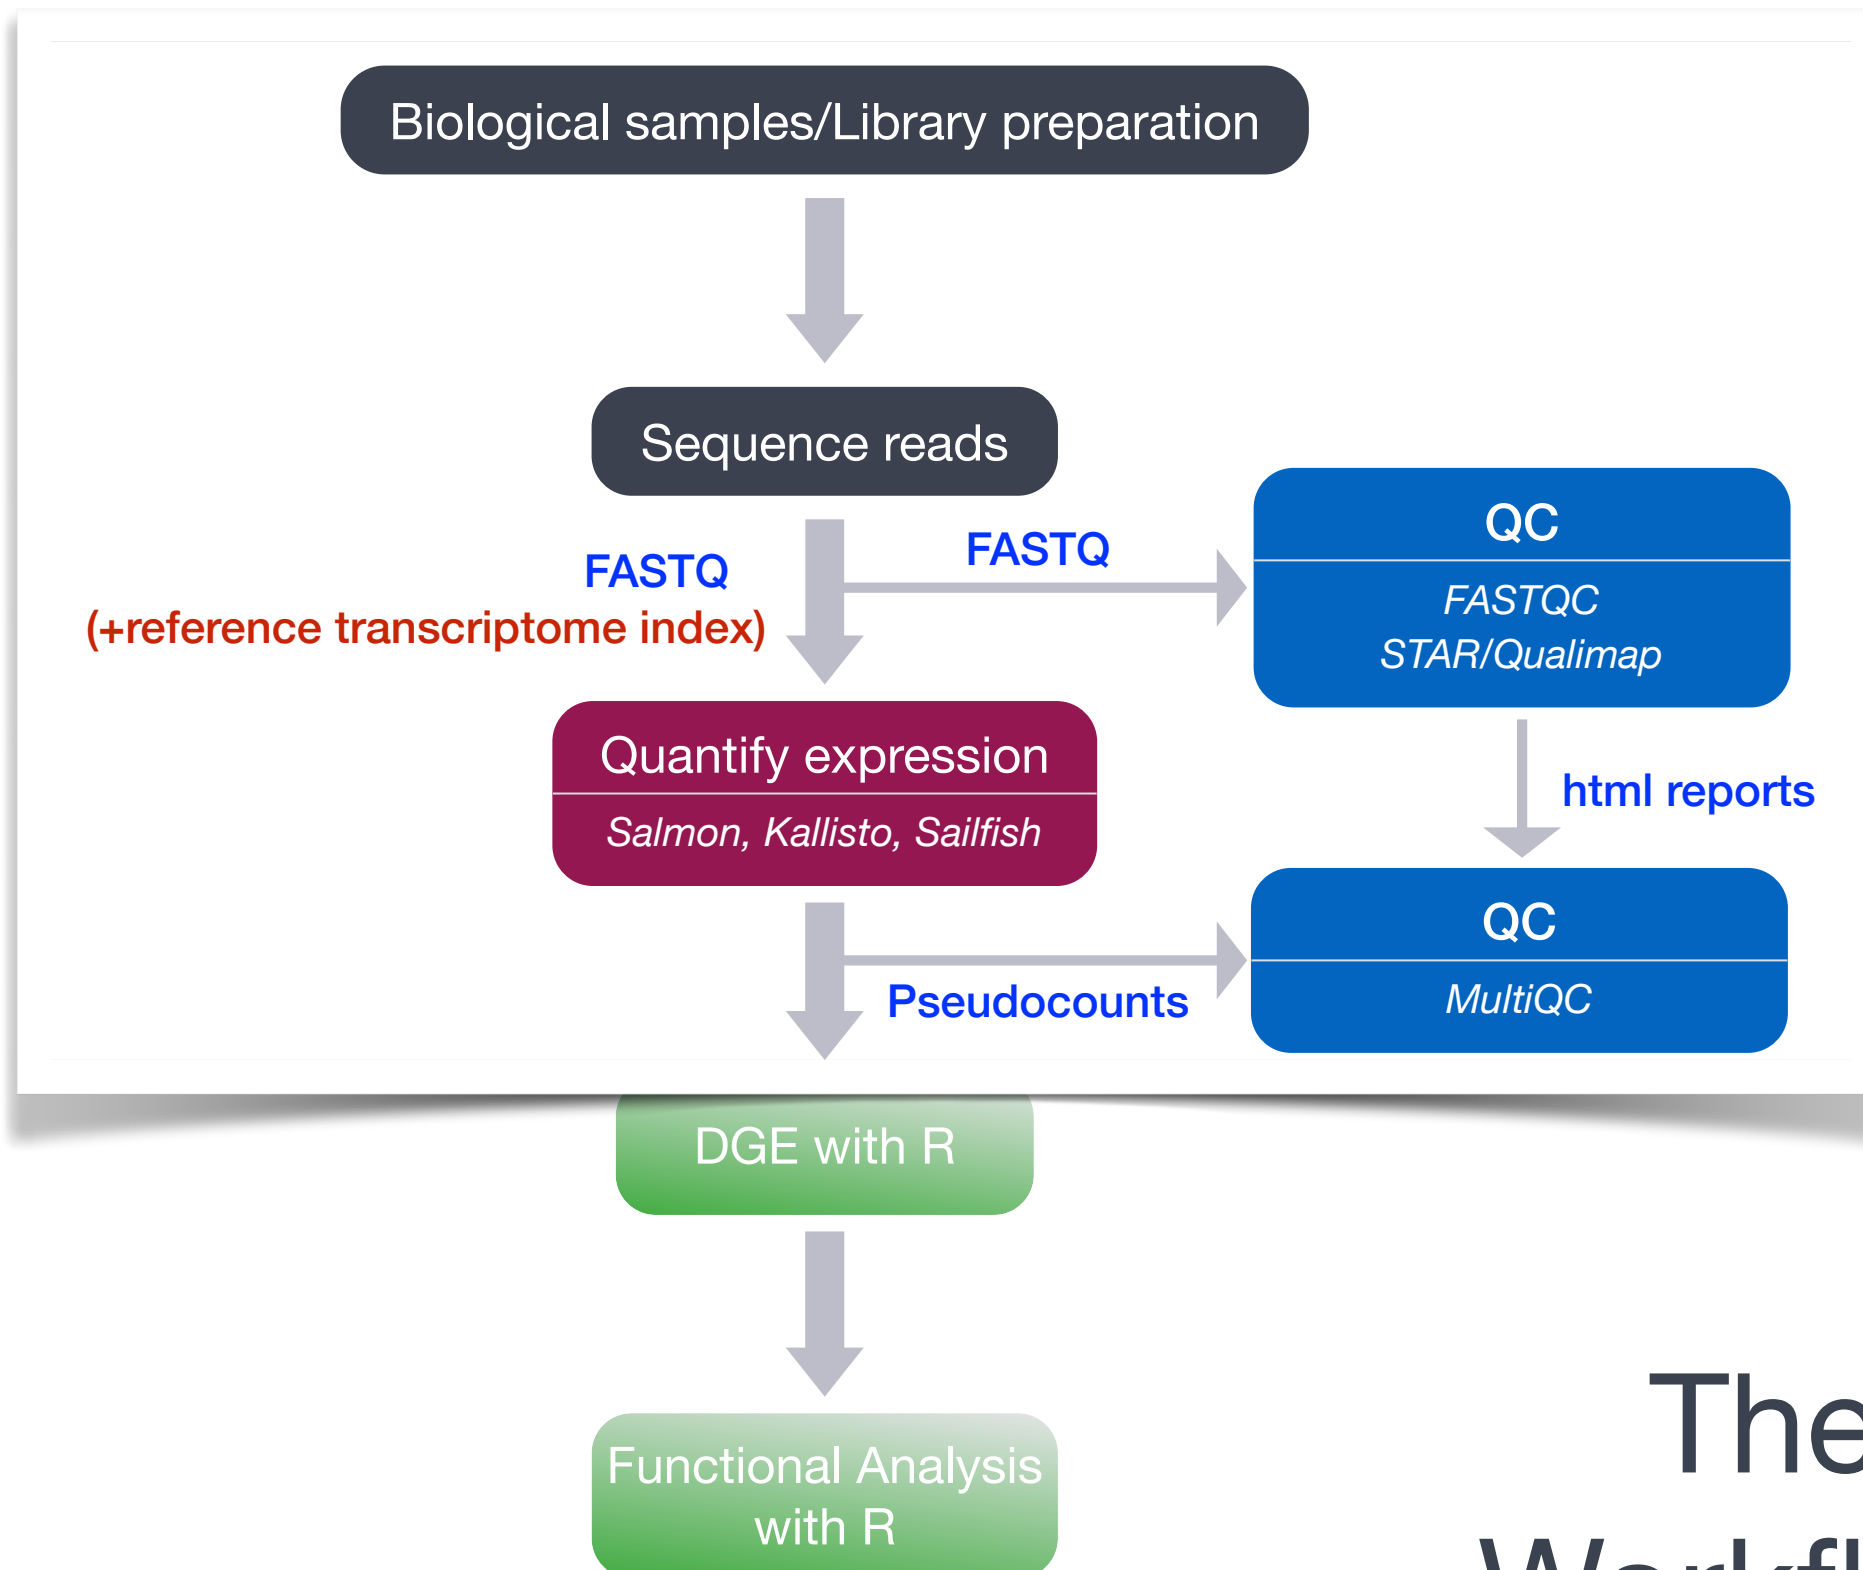

<https://tinyurl.com/hbc-rnaseq>

Learning Objectives

- ✓ Describe best practices for designing a bulk RNA-seq experiment
- ✓ Describe steps in an RNA-seq analysis workflow (from sequence data to expression quantification).
- ✓ Implement shell scripts on a high-performance compute cluster to perform the above steps.

We won't be covering how to perform differential gene expression (DGE) analysis on count data in this workshop. A DGE workshop will be held on April 1st/2nd and the pre-requisite for it is a working knowledge of R (March 12th/13th).

The Workflow

Learning Objectives

- ✓ Describe best practices for designing a bulk RNA-seq experiment
- ✓ Describe steps in an RNA-seq analysis workflow (from sequence data to expression quantification).
- ✓ Implement shell scripts on a high-performance compute cluster to perform the above steps.

Training: Continued learning & practice

Current Topics in Bioinformatics series

- *Hands-on* workshops on bioinformatics topics & related skills
- **Once a month for 2-3 hours**
- **Free and open** to everyone at Harvard University and its affiliates

Schedule and registration:
